

Planning:

Why do you think we are learning to design first, then program?

So one knows what they are doing/designing as they are programming.

What resources did you use to complete this lab?

My computer, partner, Putty, and directions given to explain the lab.

Did you use your time wisely to finish the lab on time?

Yes I did.

Monitoring:

What was the most difficult and confusing part of this lab?

Figuring out how to setup my equations/calculations.

What did you do to address the difficulties and confusions?

Testing, and consulting others around me.

Evaluation:

How well do you think you accomplished the lab?

Pretty well.

If you had to do this over, what would you have done differently?

Possibly try working with other forms with numbers rather than just working with floats.

What worked well for you and what didn't?

Typing out all of the needed commands for the program went pretty well.

Not much didn't go well for me with this lab.
