

Planning:

Why do you think design is so important?

It is important because you will have a better understanding of the format of the program when you know the design of it.

What resources did you use to complete this lab?

I have used the Lab 2 worksheet of directions, Putty, my computer, and the help from my partner.

Did you use your time wisely to finish the lab on time?

Yes I did.

Monitoring:

What was the most difficult and confusing part of this lab?

At first it was carefully reading the direction to know exactly what I am doing.

What did you do to address the difficulties and confusions?

Look over the direction again, and ask for help from my partner.

Evaluation:

How well do you think you accomplished the lab?

It was a decent accomplishment.

If you had to do this over, what would you have done differently?

Ask questions on my confusion before I did it, so I know exactly what is happen and know that I will be doing it correctly.

What worked well for you and what didn't?

The art part went pretty well, and making sure I'm in the right folder when copying, removing, and moving stuff didn't go so well, but I'm slowly figuring it out.
