

After reading, write a ~200 word post explaining how you would respond to this situation. What personal, social, or conservation issues does this bring up? Would you quit your job? Accept the chip? Sue? Something in between?

Rights, Justice, Utility, Care (Situations) Page 74

Personal, Social, Conservation (Issues) Pages 73, 73-76, 76

Laws, Codes, Records, Colleagues Opinion, Leading (Resolving/Support) Pages 81-82

Costs and Benefits, Legal Advice, Mediation, Memos, Whistle-Blowing (Disagreement)
Pages 82, 84

The first thing that comes to mind when it comes to having a Radio Frequency Identification chip insert into one of my hands in general, is that it does make me a bit uneasy. Just mainly the idea of having an object placed right under my skin that is not naturally in body, is an uncomfortable idea personally, which I suppose would be a personal issue to start things off. Such an opinion is based off the argument how one would feel as individual with such a concept (73).

Social issues in this case are that the chip would be an invasion of privacy and that there may be health issues involved with such a process, since these opinions are based off the ideas of one's rights and the utility of situations within one's environment (74).

A conservation issue would be that the creation of the radio frequency identification chip will have a possible industrial harm on the environment in order to be made (76).

I personally would not quit my job if I was working for a company that made these chips a requirement for all of their employees, but I would not be completely for it either. I will accept the fact that I will have to have it in my hand, in hopes that I would end up forgetting that it is actually there for the most part.
